DETAILED ACTION

Allowable Subject Matter

1. Claims 11, 12, 14 and 21-32 allowed.
2. Claim 34 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
3. The following is a statement of reasons for the indication of allowable subject matter:
Prior art failed to establish the relationship among gate contact, dielectric layer and perforations.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 33 and 35-38 rejected under 35 U.S.C. 103(a) as being unpatentable over Pyke (4,671,852) in view of Gouma (7,017,389)

Regarding Claim 33, Pyke discloses a method of forming suspended gate, chemically sensitive field-effect transistor where in Fig. 1D it is disclosed semiconductor device configured to sense a property of a medium, the device comprising: an electrical contact 16/14 that includes at least one perforation 18 to expose a sensing layer 8/12 to the medium in an area below the electrical contact; a dielectric layer 8 disposed below the contact; and semiconductor active structure 2 disposed below the dielectric layer, wherein

the sensing layer comprises at least one of: the dielectric layer and a dielectric layer in the active structure. Pyke fails to disclose the required nitride structure. However, Gouma discloses sensors including metal oxides selective for specific gases and methods for preparing same where in Fig. 20, sensor substrate is nitride bases semiconductor substrate.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to have the nitride substrate in Pyke as taught by Gouma for high speed semiconductor device applications.

Regarding Claim 35, Gouma discloses in Fig. 20 the GaN substrate 20.

Regarding Claim 36, both Pyke and Gouma disclose field effect transistors.

Regarding Claim 37, in Fig. 1D of Pyke, element 16 is a gate contact.

Regarding Claim 38, in Fig. 1D of Pyke, element 8 is a silicon dioxide dielectric layer.

Conclusion

6. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
